

## Interpret a Data Visualization

The report shows the ranking of LinkedIn top skills for 2016, countrywise. I hovered over each skills and countries to study the ranking of each country and its field. Based on the average rank for each skills, we observe that the technology industry has been growing up rapidly, while fields like marketing are growing in a slow pace. The Cloud computing industry has been growing good and stands almost near the average global rank in most of the countries, while statistical analysis and data mining follows a similar pattern. Based on overall Global data, all the fields seem to have seen a considerable growth.

Country Ranking by Skill (dashed line indicates global average rank for skill)

I wanted to study the User Interface Design skill in specific, since it had more green dots compared to other skills. It seems to be ranked above the global average rank for most of the countries except for India and United states however global rank still seems to be almost near to the median.
